Integration by parts and substitution worksheet

Math Character

Name:

Solving Systems of Equations Using Simple Substitution Part One

___ Class Period: ____ Date: ___

When teachers are gone, we hope you remember the new person standing in front of the room is not the enemy. They are someone's mother, father, sister, brother, daughter or son. Treat them like you would want your family treated; or maybe even better.

Find the solution to each system. Put the letter for each system above the correct answer to fill in the code. The first problem is partially completed for you.

(-15,-21) (1,10) (12,-5) (5,20) (2,-5) (1,10) (5,-5) (10,16) (5,-5) (-1, 1) (1,10) (3,15) (-6,-4) (-15,-21)

For help with this worksheet go to Mathops.com Section 10 Lesson 2. Copyright © 2010 by Twining Mathematics, LLC LS 2

Solutions to Worksheet for Section 5.5 Integration by Substitution

V63.0121, Calculus I Summer 2010

1. $\int (3x-5)^{17} dx, u = 3x-5$

Solution. As suggested, we let u = 3x - 5. Then du = 3 dx so $dx = \frac{1}{3} du$. Thus $\int (3x - 5)^{17} dx = \frac{1}{3} \int u^{17} du = \frac{1}{3} \cdot \frac{1}{18} u^{18} + C = \frac{1}{54} (3x - 5)^{18} + C$

2. $\int_0^4 x\sqrt{x^2+9} \, dx, \ u = x^2+9$

3.]

Solution. We have du = 2x dx, which takes care of the x and dx that appear in the integrand. The limits are changed to u(0) = 9 and u(4) = 25. Thus

$$\begin{split} \int_0^4 x\sqrt{x^2+9}\,dx &= \frac{1}{2}\int_9^{25}\sqrt{u}\,du = \frac{1}{2}\cdot\frac{2}{3}\,u^{3/2}\Big|_g^{25}\\ &= \frac{1}{3}\cdot(125-27) = \frac{98}{3}. \end{split}$$

$$\int \frac{e^{\sqrt{2}}}{2} dx = 2 \int e^{x} dy = 2e^{x} + C$$

Integration by parts and substitution worksheet with answers.

Show Mobile Notice Show All Notes Hide All Notes Hide All Notes Mobile Notice You appear to be on a device with a "narrow" screen width (i.e. you are probably on a mobile phone). Due to the nature of the equations will run off the side of your device is not in landscape mode. If your device is not in landscape mode many of the side of your device is not in landscape mode. (should be able to scroll to see them) and some of the menu items will be cut off due to the narrow screen width. Here are a set of practice problems for the Applications of Integrals chapter of the solutions for the full book, chapter and section. At this time, I do not offer pdf's for solutions to individual problems. If you'd like to view the solution so the problem and it will take you to the solution to that problem. Note that some sections will have more problems than others and some will have more or less of a variety of problems. Most sections should have a range of difficulty levels in the problems although this will vary from section. Here is a list of all the sections for which practice problems have been written as well as a brief description of the material covered in the notes for that particular section. this section we will look at using definite integrals to determine the average value of a function on an interval. We will also give the Mean Value Theorem for Integrals in this chapter. We will determine the area of the region bounded by two curves. Volumes of Solids of Revolution / Method of Rings/disks to find the volume of a solid of revolution, we will look at the method of rings/disks to find the volume of a solid of revolution, we will look at the method of rings/disks to find the volume of the object we get by rotating a region bounded by two curves. axis of rotation. Volumes of Solids of Revolution / Method of Cylinders - In this section, the second of two sections devoted to finding the volume of a solid of revolution, we will look at the method of cylinders/shells to find the volume of a solid of revolution, we will look at the method of cylinders area of the volume of a solid of revolution, we will look at the method of cylinders area of the volume of the volum vertical or horizontal axis of rotation. More Volume Problems - In the previous two sections we looked at solids that could be found by treating them as a solid of revolution and, in fact, not all solids of revolution can be easily dealt with using the methods from the previous two sections. So, in this section we'll take a look at finding the volume of some solids that are either not solids of revolutions or are not easy to do as a solid of revolution. Work - In this section we will look at is determining the amount of work required to move an object subject to a force over a given distance. In order to continue enjoying our site, we ask that you confirm your identity as a human. Thank you very much for your cooperation. Show Mobile Notice Show All Notes Hide All Notes Hide All Notes Hide a "narrow" screen width (i.e. you are probably on a mobile phone).
